In 1912 Victor

Franz Hess made the revolutionary discovery that ionizing radiation is incident upon the Earth from outer space. He showed with ground-based and balloon-borne detectors that the intensity of the radiation did not change significantly

between day and night.

Consequently, the sun could not be regarded as the sources of this radiation and the question of its origin remained unanswered. Today, almost one hundred years later the question of the origin of the cosmic

radiation still
remains a mystery.
Hess' discovery has
given an enormous
impetus to large
areas of science, in
particular to
physics, and has
played a major role
in the formation of
our current
understanding of
universal evolution.
For example, the

development of new fields of research such as elementary particle physics, modern astrophysics and cosmology are direct consequences of this discovery. Over the years the field of cosmic ray research has evolved in various

directions: Firstly,
the field of particle
physics that was
initiated by the
discovery of many
so-called
elementary
particles in the
cosmic radiation.
There is a strong
trend from the
accelerator physics
community to
reenter the field of

cosmic ray physics,
now under the name
of astroparticle
physics. Secondly,
an important branch
of cosmic ray
physics that has
rapidly evolved in
conjunction with
space exploration
concerns the low
energy portion of
the cosmic ray
spectrum. Thirdly,

Access Free 2001 Larson Sei 100 Manual

research that is concerned with the origin, acceleration and propagation of the cosmic radiation represents a great challenge for astrophysics, astronomy and cosmology. Presently very popular fields of research have

such as high-energy
gamma ray and
neutrino astronomy.
In addition, high-
energy neutrino
astronomy may
soon initiate as a
likely spin-off
neutrino
tomography of the
Earth and thus open
a unique new
branch of

geophysical
research of the
interior of the
Earth. Finally, of
considerable
interest are the
biological and
medical aspects of
the cosmic radiation
because of its
ionizing character
and the inevitable
irradiation to which
we are exposed.

This book is a reference manual for researchers and students of cosmic ray physics and associated fields and phenomena. It is not intended to be a tutorial.

However, the book contains an adequate amount of background materials that its

Access Free 2001 Larson Sei

100 Manual should be useful to a broad community of scientists and professionals. The present book contains chiefly a data collection in compact form that covers the cosmic radiation in the vicinity of the Earth, in the Earth's atmosphere, at sea

Included are
predominantly
experimental but
also theoretical
data. In addition the
book contains
