Architects In Pakistan

The Architecture of Lahore reflects the history of Lahore and is remarkable for its variety and uniqueness. There are buildings left from the centuries ago rule of the Mughal Dynasty, the Sikh Empire, as well as from the era of the British Raj, whose style is a mixture of Victorian and Islamic architecture often referred to as Indo-Gothic. In addition, there are newer buildings which are very modern in their design. An interesting point about Lahore’s architecture is that unlike the emphasis on

Architecture of Lahore - Wikipedia

Colonial architecture of Pakistan
The modern State of Pakistan had been a part of British India which was an integral part of the British Empire that lasted more than a century. After the United Kingdom willingly granted the independence of state in 1947, that was conceived in early 1930s. The British introduced a new style of architecture.

Unfortunately such tombs have never been studied adequately. These tombs present strong connection between Central Asia and architecture of Pakistan. Octagonal in plan, corner towers, uses of glazed tiles, use of muqarnas in the pishtaq in the interior are some of the feature which put deep impression on the architecture of Sindh.

A history of architecture in Pakistan from pre-historic to contemporary times. The study, undertaken over a period of ten years, is illustrated with photographs of the buildings and their architectural features.

The book explores some of the central issues in the current discourse on transitional cultures, in a world increasingly dominated by technological innovations and rapidly changing values. Critiquing modernity as a Euro-centric ideology which has little relevance or meaning in the context of cultures with different experiences of history, sensitivities, and belief systems, the book presents the traditional perspective, rooted in perennial wisdom, as an alternative framework. Here not only do art and architecture have a positive and constructive role and function, but human endeavour generally can find a purpose and direction.

Pakistan ’s historic architecture is dominated by tombs and holy monuments. Pakistan is also known for its contemporary design. In 1958, Pakistan opted to relocate its capital from Karachi to a new city that would be named Islamabad, or "Land of Islam ".Multiplicity describes pakistani architecture. Contemporary ventures deal with numerous narratives, both pursuing tradition and departing from it. Modern designs are influenced by broader contexts, guided by the coexistence and juxtaposition of situations such as controlled growth and informal settlements in Karachi and Islamabad; These public and private initiatives in turn explore new ways and designs. Even though Pakistan has a strong history of structures from Indo-Saracen and Mughal, there are several other examples of Islamic architecture and modern ventures.Dive right straight into this book to discover more about the history, culture, people and architectural designs of Pakistan!

This thesis attempts to deal with some of the major issues relating to Pakistani architecture today as well as the consequent development of an architectural identity. In order to establish the framework for the study various discourses that reflect on the notion of identity have been examined. Due to the lack of an indigenous architectural discourse, and the consequent absence of critically rigorous information on the subject, this work is devoted to augmenting the very limited material available on the state of the architectural profession in Pakistan and to increasing an awareness of the directions that this architecture is presently taking. As a means of furthering an understanding of architecture in Pakistan the first part of this thesis provides some information on the development of architecture in Pakistan both in terms of historical evolution as well as through the development of educational institutions such as The National College of Arts. The rest of the work deals with the existing and emerging 'directions' (in Pakistani architecture) as they are manifested in the projects of several influential architects. The three architects chosen for this study and whose work best represents the current range of architecture in Pakistan are; Habib Fida Ali, one of the most experienced and respected architects in Karachi, who having studied at the Architectural Association is a strong proponent of the modern aesthetic. Habib Fida Ali represents the 'modern' current that runs through Pakistani architecture. Nayyar Ali Dada, an N.C.A. trained architect who has had the opportunity to do a great deal of important work both in Lahore and Islamabad. Nayyar Dada embodies in his work and approach the majority of architecture in Pakistan, which while aspiring towards modernism is affected not only by the living vernacular traditions but also by the fast developing rejectionist attitude towards modernism. Kamil Khan Mumtaz, as he makes quite clear in his book Architecture in Pakistan is a supporter of the "vernacular tradition". Kamil Khan is an architectural practitioner and a noted academic, who was the head of the department of architecture at the National College of Arts, Lahore between the years 1%6-1975. An evaluation of these architects' work is to be undertaken on two levels - a critical analysis of their built work and an understanding of their own attitudes and approaches towards architecture, especially their evaluations of Pakistani architecture. This thesis can only be viewed as an introduction to their work and aims to get others interested in the multifaceted architecture being carried out in Pakistan today. I conclude with some thoughts on the notion of a Pakistani architectural identity and on the question of 'revivalism' which is gaining considerable prominence among influential circles in Pakistan.

About the Book: Pakistan is one of the most beautiful countries in the world blessed with rich cultural heritage snow-clad mountains, meadows, lush green valleys, fertile plains, Indus River and its tributaries, deserts, plateau, and a long coastal belt. It has a long and uninterrupted history from Paleolithic period to the present times. The country is located at the crossroad of several trade routes linking China in the north, Central Asia in the west and Iran and the Middle East in the south and south east. During the course of long history a large number of settlements, structures and works of arts of exceptional beauty were produced presenting a variety of concepts and philosophies. These trade routes brought influence from far and wide and had strong impact on history, culture and artistic tradition. This scholarly work has thoroughly documented the roots of architectural history and tradition of Pakistan from prehistoric to contemporary times. For the first time in history, Dr. Abdul Rehman has produced this masterpiece after years of extensive and original research. The tremendous progress made by Pakistan since 1947 in the profession of architecture has not been adequately celebrated. Since the initial years of its independence, Pakistan had an acute shortage of housing and social and technical infrastructure projects that needed well-qualified architects and planners. In order to meet the demand of qualified professionals a number of architectural schools were established over the last 74 years. At present, both senior architects and younger and recent graduates are working side by side to meet the challenges of the built environment. These architects followed several design philosophies such as modernism, classical tradition, hyper-modernism, etc. This second volume of the book, gives an in-depth overview of the challenges and contributions, as well as the philosophy of international, local, senior and younger architects. The book begins with an introduction to the state of economy and development goals to meet the socioeconomic challenges which the country has faced over time. The design philosophy and architectural contributions of early masters is discussed. Additionally, the book also covers the contributions made by the international architects whose design of large-scale projects can be seen in almost all major cities across Pakistan, as well as the foreign qualified graduates of Pakistani origin of the early years of the country had also made a significant impact in influencing the design. The book also covers the academican architects who played an important role in the development of the profession and gave it a new direction through their writings and professional works. Their contributions have been discussed in the several chapters of this book. Apart from the qualified architects, the traditional masters have also made a significant impact to the country's built environment. Their contributions are especially significant in the design of mosques and tombs. The important projects carried out by them have been discussed in the book. The contributions of architects in the field of landscape architecture and conservation are also discussed. The book finally concludes with the discussion on the challenges being faced by the profession and a way forward for improving the quality of architecture in Pakistan. About the Author: Dr. Abdul Rehman is a former Professor and Director of School of Architecture and Design, University of Engineering and Technology, Lahore. He holds a National Diploma in Architecture from National College of Arts, Lahore and a PhD degree from "Ion Mincu," University of Architecture and Urbanism, Bucharest, Romania. He has been a senior Fulbright fellow at both Harvard University and Massachusetts Institute of Technology, USA.

This study, the first of its kind, is based on the architectural documentation and photography done by the author. The historical monuments studied in this book include baolies (step-wells), caravanserais, baradaries, kos minars, bridges, hammams etc. which were meant for the welfare and comfort of the public. These were constructed during the Muslim rule in the areas now forming Pakistan. The book is illustrated

Where To Download Architecture In Pakistan

with photographs and 19 plans of some select baolies (step-wells), caravanserais, baradaries and hammams. The book would be of special interest to the scholars and students of Muslim architecture.
