that can cause disease in humans. While these microbes may have some characteristics in common, they are also very different. Bacteria are typically much larger than viruses and can be viewed under a light microscope.

Differences Between Bacteria and Viruses

Answer From Pritish K. Tosh, M.D. As you might think, bacterial infections are caused by bacteria, and viral infections are caused by viruses. Perhaps the most important distinction between bacteria and viruses is that antibiotic drugs usually kill bacteria, but they aren't effective against viruses.
