Depending on the institution, a curriculum guide might be subject- and/or grade-specific. For example, an elementary school might have curriculum guides for math, science, social studies, and language arts for each grade level from kindergarten up. Within each subject, the guide outlines objectives, or standards, that students are expected to meet by the end of a set time frame, usually the school year.

Below is the curriculum guide for the K to 12 Program. It is hosted on Google Drive and free to download. It covers the curriculum from Kindergarten, Grades 1 to 6 (Primary) and Grades 7-10 (Junior High School). Updated curriculum guides (CG) are already available here: K to 12: Kindergarten Curriculum Guide (CG) 2017

This guide provides trainee teachers with an insight into the nature and teaching of primary science. It aims to introduce you to the ways in which children learn science, and to the science itself. Each Unit can be studied independently or used to support/prepare for school experiences. You will be directed towards additional reading, which will develop or confirm the subject knowledge you will need to achieve QTS. the curriculum guide is up-to-date, revised to take account of Curriculum 2000 and accepted 'good practice' in primary science teaching and learning. It is also flexible - many of the Units are stand-alone. They can be undertaken in any order, at your own pace, to complement school experiences. The Units are practical and feasible: the activities suggested can be undertaken by the non-specialist; in many cases without specialized equipment or access to large numbers of pupils. The guide is comprehensive, covering all the primary science elements in Curriculum 2000 and giving background information into other aspects of primary science teaching. It is also supportive - the guide suggests further texts to support trainees' own understanding of the scientific and pedagogical concepts involved. Additional reading draws on the TTA's list of approved key texts. The original text was piloted by students following a distance-learning PGCE course. It has been revised and updated in line with their comments and to meet Curriculum 2000 and Curriculum Guidance for the Foundation Stage. The text was initially developed as a core text for the part-time distance-learning course at Liverpool Hope and is designed for trainee teachers on distance learning and flexible routes, returning, converting or overseas teachers.

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.
