Another straightforward calculation will show that

$$\operatorname{grad} \operatorname{div} \mathbf{F} - \operatorname{curl} \operatorname{curl} \mathbf{F} = \Delta \mathbf{F}.$$

The vector Laplacian also arises in diverse areas of mathematics and the sciences. The frequent

the curl of a vector field. There are two points to get over about each: The mechanics of taking the grad, div or curl, for which you will need to brush up your multivariate calculus. The underlying physical meaning — that is, why they are worth bothering about. In Lecture 6 we will look at combining these vector operators.

Grad and div generalize to all oriented pseudo-Riemannian manifolds, with the same geometric interpretation, because the spaces of 0-forms and n -forms is always (fiberwise) 1-dimensional and can be identified with scalar fields, while the spaces of 1-forms and $(n - 1)$ -forms are always fiberwise n -dimensional and can be identified with vector fields.
