With the GE90, GE introduced the composite fan blade—the first-ever in commercial aviation. Measuring more than four feet long and weighing less than 50 pounds, the GE90 fan blade is made from carbon fiber and a toughened epoxy matrix that delivers double the strength and one-third the weight of titanium. The GE90 fan blade's uniquely curved design makes it larger, lighter and more aerodynamic than traditional titanium blades for reduced engine weight and lower fuel burn.

~~The GE90 Engine | GE Aviation~~

The General Electric GE90 is a family of high-bypass turbofan aircraft engines built by GE Aviation for the Boeing 777, with thrust ratings from 81,000 to 115,000 lbf. It entered service with British Airways in November 1995. It is one of three options for the 777-200, -200ER, and -300 versions, and the exclusive engine of the -200LR, -300ER, and 777F. It is the most powerful and was the largest jet engine, until its 6 in wider fan successor, the 110,000 lbf GE9X, powered the Boeing 777X first f

~~General Electric GE90 - Wikipedia~~

While GE's competitors boosted the power of their derivative engines, they still required substantial design changes to achieve thrust beyond 100,000 pounds. The GE90-115B was the right solution. "The GE90-115B is a culmination of our original strategy to build a new centerline engine," said McNerney, adding that the engine "hits the sweet spot" on the original design from 1990.

~~IEC QUICK REFERENCE CHART - Electric Motor Service~~

Big things often come from humble beginnings. Take the GE90, a jet engine so powerful it started a decades-long revolution in passenger aviation that is still ongoing. The engine allowed large widebody jets with just two engines, instead of the typical four, to fly people between continents, lowering the cost of fuel and maintenance for airlines along the way.
