• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “ At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported-by-effects include increased determination and a sense of grounded hope. ” \u2014Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “ There ’ s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom. ” \u2014David Roberts, Vox “ This is the ideal environmental sciences textbook\u2014only it is too interesting and inspiring to be called a textbook. ” \u2014Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here\u2014some are well known, some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth ’ s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being\u2014giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Wiley's Remediation Technologies Handbook: Major ContaminantChemicals and Chemical Groups, extracted from the Enviroglobedatabase, consists of 368 chemicals and chemical groups. This booklists in alphabetical order these chemical and chemical groupsalong with the numerous technologies, many of which are patented,or trademarked techniques, to remediate them. A short descriptionof each of these technologies is provided along with appropriatereferences. Wiley's Remediation Technologies Handbook: MajorContaminant Chemicals and Chemical Groups: Covers the most important chemical and chemical groups that arefound to pollute the environment, and the ways to remediatethem. Gives succinct abstract describing the numerous technologiesused to clean-up a wide range of pollutants. Provides the uses and limitations of each technique. Note: CD-ROM/DVD and other supplementary materials arenot included as part of eBook file.

The Directory of Corporate Counsel, Fall 2021 Edition remains the only comprehensive source for information on the corporate law departments and practitioners of the companies of the United States and Canada. Profiling over 30,000 attorneys and more than 12,000 companies, it supplies complete, uniform listings compiled through a major research effort, including information on company organization, department structure and hierarchy, and the background and specialties of the attorneys. This newly revised two volume edition is easier to use than ever before and includes five quick-search indexes to simplify your search: - Corporations and Organizations Index - Geographic Index - Attorney Index Law - School Alumni Index - Nonprofit Organizations Index Previous Edition: Directory of Corporate Counsel, Spring 2021 Edition, ISBN 9781543836479

The Code of Federal Regulations is a codification of the general and permanent rules published in the Federal Register by the Executive departments and agencies of the United States Federal Government.

If there ever was a time to build an American hemp industry, the time is now. In Jesse Ventura ' s Marijuana Manifesto, former Minnesota Governor teamed up with Jen Hobbs to explain why it ' s time to fully legalize cannabis and end the War on Drugs. Through their research, it became clear that hemp needed its own manifesto. Jen Hobbs takes up this torch in American Hemp. December of 2018 marked a largely unprecedented victory for cannabis. The 2018 Farm Bill passed and with it hemp became legal. What the federal government listed for decades as a schedule 1 narcotic was finally classified as an agricultural crop, giving great promise to the rise of a new American hemp industry. Filled with catchall research, American Hemp examines what this new domestic crop can be used for, what makes it a superior product, and what made it illegal in the first place; the book also delves into the many health and medical benefits of the plant. Hobbs weighs in on how hemp can improve existing industries, from farming to energy to 3D printing, plus how it can make a serious impact on climate change by removing toxins from the soil and by decreasing our dependence on plastics and fossil fuels. American Hemp lays out where we are as a nation on expanding this entirely new (yet ancient) domestic industry while optimistically reasoning that by sowing hemp, we can grow a better future and save the planet in the process.

While the public is generally aware of the use of hydraulic fracturing for unconventional resource development onshore, it is less familiar with the well completion and stimulation technologies used in offshore operations, including hydraulic fracturing, gravel packs, "fracpacs," and acid stimulation. Just as onshore technologies have improved, these well completion and stimulation technologies for offshore hydrocarbon resource development have progressed over many decades. To increase public understanding of these technologies, the National Academies of Sciences, Engineering, and Medicine established a planning committee to organize and convene a workshop on Offshore Well Completion and Stimulation: Using Hydraulic Fracturing and Other Technologies on October 2-3, 2017, in Washington, DC. This workshop examined the unique features about operating in the U.S. offshore environment, including well completion and stimulation technologies, environmental considerations and concerns, and health and safety management. Participants from across government, industry, academia, and nonprofit sectors shared their perspectives on operational and regulatory approaches to mitigating risks to the environment and to humans in the development of offshore resources. This publication summarizes the presentations and discussions from the workshop.
