presence of decreased contact hours to fulfil the curricular need of more integration. This book will target medical educationists and students who may find it easier to develop concepts in gross anatomy, embryology, histology and neuroanatomy. Since planning learning experiences, their implementation and student assessment, are closely related activities, care is taken to develop a process for clinically-oriented multiple choice questions in anatomy that satisfy the theme and objectives of anatomy. The issues related to laboratory activities have also been addressed so as to emphasise objective-structured practical examination that is integrated and clinically relevant during the early period of the medical curriculum. The students perception has been brought to our attention and given a great focus. This book for the first time addresses education in anatomy and provides a great resource for medical schools
