Sarah Tishkoff: Human Population Genetics and Origins Human Population And Carrying Capacity

Human population, now nearing 8 billion, cannot continue to grow indefinitely. There are limits to the life-sustaining resources earth can provide us. In other words, there is a carrying capacity for human life on our planet. Carrying capacity is the maximum number of a species an environment can support indefinitely.

Sometime over the next millennium -- a relatively short time when you consider the age of the Earth -- the human population's carrying capacity will be realized. Assuming space as the limiting factor, and a population growth rate of 1% (It's currently 1.14%), the population density of Earth will equal one human being per square meter of land in a little over 1,000 years.
