Frenchman Leon Levavasseur was a 39-year-old inventor in 1902 when he took out a patent for the first V-8 engine he called the Antoinette. The V8 since then has become the most reliable and efficient internal combustion engine to power automobiles and to see extensive use in power boats and early aircraft.

A V8 engine is an eight-cylinder piston engine in which the cylinders share a common crankshaft and are arranged in a V configuration. The first known working V8 engine was produced by the French company Antoinette in 1904 for use in aircraft, and the 1914–1935 Cadillac L-Head engine is considered the first automotive V8 engine to be produced in significant quantities. The popularity of V8 engines in cars was greatly increased following the 1932 introduction of the Ford Flathead V8.

The Invention of the Ford V8 Engine is a documentary about the development of the original Ford V8 - the Flathead that made its debut in 1932, forever cementing the "Deuce" in the annals of hot rod history. The video has clearly been encoded from film and it's a little crackly at times, but if you can persist with it you'll be treated to one of the great automotive engineering stories of 20th century America.

History and Development of the V8 Engine. Abstract First developed in 1876 by Nicolaus Otto, the internal combustion engine has revolutionised personal transport since it was first fitted to a threewheeled automobile ten years later. Obviously it has changed dramatically since then in terms on the technology applied in design and construction, but the basic principles of operation remain the same.

~~Ford Flathead V8 Engine History — DIY Ford~~

The question of who built the very first V8 engine remains, like much of motoring history, the subject of conjecture. What is irrefutable is that, in 1902, Léon Levavasseur took out a patent on a light but quite powerful gasoline injected V8 engine. He called it the 'Antoinette' after the young daughter of his financial backer.
