A woman's body is discovered on a Cornish farm, battered and left for dead in a maize field. As she's airlifted to hospital, her life hanging in the balance, no one's sure who she is. Three days later she comes round. She knows her name - Evie - but no more, until she remembers another name: Angel - her three-year-old daughter. As the police circulate Evie's photo, someone recognizes her. Charlotte knew her years ago, at school, when another child went missing. When the police search Evie's home, there's no sign of Angel. More disturbingly, there's no evidence that she ever lived there. Evie believes her daughter is alive, but the police remain unconvinced - unaware that there's someone watching her every move, with their own agenda and their own twisted version of reality...

Rufus Marigold is a primate with a problem. He suffers acutely from anxiety and every social encounter is a harrowing ordeal. A budding artist, Rufus spends his days working in an office. As life become increasingly more of a struggle, Rufus yearns to be defined as something other than an a complete nervous wreck. This volume collects and significantly expands upon the original web comic, resulting in a darkly hilarious yet moving account of living with anxiety.

This book explores the significance of silence within and beyond pedagogical contexts. Silence is a complex and multidimensional

phenomenon for everyday life: since schools mirror society, it is also significant in education. While silence can be experienced in a multitude of different ways, the author reflects on whether silence itself can bear a message: is there an aspect of dialogue in silence, or is it a language all of its own? This book examines a variety of silences essential for education, examining such topics as silence and aspects of power, silent students, and the relationship between listening and silence. Drawing on a range of empirical data, the author elucidates the significance of silence in pedagogical contexts.

A great silence has settled upon a drowned world. In the final battle of their final war, the massive citysubs *Universalis* and *Population* reduced each other to ruins. One lays wrecked on the seafloor. The other, beached and lifeless, litters the island of pristine polar ice it tried to destroy. Pockets of survivors huddle together. On the frigid surface, Ralla Gattley and Thom Vargas cling to life and each other. Below, the soldier Geran Lo fights relentlessly to free trapped and drowning civilians. As they struggle against a world determined to kill them, a new and even more dangerous menace approaches. *Undersea Atrophia* is the second book in the *Undersea Saga*.

This book presents a beginning study in electric power systems from generation and transmission to power distribution and the analysis of power grid networks. The author has conducted power system classes at electric utility companies throughout the United States and in 20 other countries throughout the world. His clients have included such companies as General Electric, Stewart & Stevenson, LLC, the Hitachi and Kawaski corporations in Japan, the Wuxi Electric and Quan Ling power projects in China, the YPF power conglomerate in South America, and many others throughout the Far East, Western Europe, and Africa. Questions are included after major sections for use as a learning aid. Projectable illustrations from the book for classroom use and additional book

This book, now in its second edition, continues to provide a comprehensive introduction to the principles of chemical engineering thermodynamics and also introduces the student to the application of principles to various practical areas. The book emphasizes the role of the fundamental principles of thermodynamics in the derivation of significant relationships between the various thermodynamic properties. The initial chapter provides an overview of the basic concepts and processes, and discusses the important units and dimensions involved. The ensuing chapters, in a logical presentation, thoroughly cover the first and second laws of thermodynamics, the heat effects, the thermodynamic properties and their relations, refrigeration and liquefaction processes, and the equilibria between phases and in chemical reactions. The book is suitably illustrated with a large number of visuals. In the second edition, new sections on Quasi-Static Process and Entropy Change in Reversible and Irreversible Processes are included. Besides, new Solved Model Question Paper
