With the recent advent of technologies that make detecting art forgeries easier, the art world has become increasingly obsessed with verifying and ensuring artistic authenticity. In this unique history, Thierry Lenain examines the genealogy of faking and interrogates the anxious, often neurotic, reactions triggered in the modern art world by these clever frauds. Lenain begins his history in the Middle Ages, when the issue of false relics and miracles often arose. But during this time, if a relic gave rise to a cult, it would be considered as genuine even if it obviously had been forged. In the Renaissance, forgery was initially hailed as a true artistic feat. Even Michelangelo, the most revered artist of the time, copied drawings by other

masters, many of which were lent to him by unsuspecting collectors. Michelangelo would keep the originals himself and return the copies in their place. As Lenain shows, authenticity, as we think of it, is a purely modern concept. And the recent innovations in scientific attribution, archaeology, graphology, medical science, and criminology have all contributed to making forgery more detectable—and thus more compelling and essential to detect. He also analyzes the work of master forgers like Eric Hebborn, Thomas Keating, and Han van Meegeren in order to describe how pieces baffled the art world. Ultimately, Lenain argues that the science of accurately deciphering an individual artist's unique characteristics has reached a level of forensic sophistication matched only by the forger's skill and the art world's paranoia.

This handbook acquaints readers with the exciting developments in various areas of cyanobacterial research in the backdrop of the publication of complete genome sequence of the cyanobacterium *Synechocystis* sp. strain PCC 6803 in 1996. It begins with a summary of the current knowledge on the taxonomy, phylogeny and evolution of cyanobacteria followed by the sequenced genomes, differentiation of akinetes and heterocyst. The book considers mechanisms of cellular movements (gliding, swimming and twitching motions) exhibited by various cyanobacteria in order to adjust to their environmental niches and the operation of the circadian rhythms. It covers cyanobacterial symbiosis, cyanophages and cyanobacterial toxins, followed by a discussion on stress responses (salinity, temperature, desiccation and oxidation). A

She continued with the British Pacific Fleet until May 1946. Now designated as a war memorial to the 142 RN destroyers and 11,000 men lost during

WWII, she is on display at Chatham Historic Dockyard. As is the case for many museum ships there is a surprising shortage of informative and well illustrated guides, for reference during a visit or for research by enthusiasts - ship modellers, naval buffs, historians or students. This book, in the Seaforth Historic Ship series, redresses the gap. Containing more than 200 specially commissioned photographs, the book takes the reader on a superbly illustrated tour of the ship, from bow to stern and deck by deck. Significant parts of the vessel – for example, the gun turrets and engine rooms – are given detailed coverage both in words and pictures, so that the reader has at hand the most complete visual record and explanation of the ship that exists. In addition, the importance of the ship, both in her own time and now as a museum vessel, is explained. No other book offers such
