Essays examine the use of marketplaces, the role of merchants and artisans, and the operation of trade networks.

This groundbreaking study challenges the notion that the shift of commercial power from Antwerp to Amsterdam in the sixteenth century was inevitable, and that the persistence of medieval practices in the former city doomed it to economic decline. Instead, it is argued that the physical division of the Low Countries into separate, hostile, states forced Amsterdam to redefine its role as trading capital of the Dutch Republic, and provided it with unique opportunities that it fully exploited.

Markets feature prominently in recent research of premodern historians as well as economists. Discussions cover the questions, for example, how a market can be grasp as a place, an event or a mechanism of exchange, or whether premodern economies have just hosted markets or if some of them can even be regarded as market economies. The proposed volume will now turn to the agents who forged and connected markets. Exchange was done between persons and with the help of persons: Artisans, retailers and poor people tried to better their living conditions by engaging on the market, merchants interconnected different markets, urban personnel (such as brokers, men working at the public scales, or the town council as a whole) regulated and facilitated exchange. By focusing on economic practices and the agents who performed them, the volume aims at analyzing the specific

Markets emerge in recent historical research as important spheres of economic interaction in ancient societies. In the case of ancient Egypt, traditional models imagined an all-encompassing centralized, bureaucratic economy that left practically no place for market transactions, as many surviving documents only described the activities of the royal palace and of huge institutions--mainly temples. Yet scattered references in the sources reveal that markets and traders were crucial actors in the economic life of ancient Egypt. In this perspective, this volume aims to discuss the role of markets, traders and economic interaction (not necessarily organized through markets) and the use of "money" (metals, valuable commodities) in pre-modern societies, based on archaeological, anthropological and historical evidence. Furthermore, it intends to integrate different perspectives about the social organization of transactions and exchanges and the different forms taken by markets, from meeting places where exchanges operated under ritualized procedures and conventions, to markets in which profit-seeking activities were marginal in respect with other practices that stressed, on the contrary, community collaboration. The book also deals with social forms of pre-modern exchanges in which trust and ethnic solidarity guaranteed the validity of commercial operations in the absence of formal codes of laws or accepted authorities over long distances (trade diasporas, guilds, etc.). Finally, the volume analyzes a critical aspect of small-scale trade and markets, such as the commercialization of agricultural household production and its impact on the peasant economic strategies. In all, the book covers a diversity of topics in which recent research in the fields of economic sociology, archaeology, anthropology, economics and history proves invaluable in order to analyze the role of Egyptian trade in a broader perspective, as well as to suggest new venues of comparative research,

theoretical reflection and dialogue between Egyptology and social sciences. The book will also address pre-modern social organizations of trade activities in which trust and ethnic solidarity guaranteed the validity of commercial operations in the absence of formal codes of laws or accepted authorities over long distances, particularly trade diasporas, guilds, etc. This book will be the first in the new series from Oxbow, Multidisciplinary Approaches to Ancient Societies.

Ancient market activities are dynamic in the economies of most ancient states, yet they have received little research from the archaeological community. Archaeological Approaches to Market Exchange in Ancient Societies is the first book to address the development, change, and organizational complexity of ancient markets from a comparative archaeological perspective. Drawing from historical documents and archaeological records from Mesoamerica, the U.S. Southwest, East Africa, and the Andes, this volume reveals the complexity of ancient marketplace development and economic behavior both in hierarchical and non-hierarchical societies. Highlighting four principal themes—the defining characteristics of market exchange; the recognition of market exchange archaeologically; the relationship among market, political, and other social institutions; and the conditions in which market systems develop and change—the book contains a strong methodological and theoretical focus on market exchange. Diverse contributions from noted scholars show the history of market exchange and other activities to be more dynamic than scholars previously appreciated. Archaeological Approaches to Market Exchange in Ancient Societies will be of interest to archaeologists, anthropologists, material-culture theorists, economists, and historians.
