im having a problem with my 3406 b cat. It is starting to overheat. I replaced the thermostat which didn't solve the problem. I am getting back pressure in the radiator. the engine runs perfectly with plenty of power with no misfiring or white smoke from the exhaust. Is there anything else that could cause this other than a head gasket??

When the governor control is moved to make an increase in engine speed, the linkage moves to turn the fuel control shaft to put more fuel into each injection. When the adjustment of the fuel ratio control is correct there will be enough increase in the fuel for injection to make the engine accelerate rapidly.
